

SP Credit Volume — SCA

LiSTNR + Hit + Triple M + Press Start — April 2026 metrics, 1-year contract

1. Input Summary

Web MUVs

Property	Monthly Unique Visitors
LiSTNR Home	41,000
LiSTNR Articles	100,000
LiSTNR Player	210,000
Hit	82,000
Triple M	92,000
Press Start	192,000
Corporate	21,000
Total Web MUVs	738,000

Mobile MUVs

Property	Monthly Active Users
LiSTNR App	350,000
Total Mobile MUVs	350,000

Combined MUVs

Channel	Monthly Volume
Web	738,000
Mobile	350,000
Total MUVs	1,088,000

Monthly Email Sends

Brand	Monthly Sends
LiSTNR	370,000
Hit	1,100,000
Triple M	541,000
Press Start	80,000
Total Monthly Emails	2,091,000

Other Volumes (not in SP credit formula)

Metric	Monthly Volume
LiSTNR total email subscribers	2,600,000
LiSTNR mobile real-time ingest events	90,000,000
LiSTNR monthly push sends	425,000
LiSTNR monthly in-app sends	200,000
LiSTNR personalisation campaign responses	120,000
LiSTNR Content Metadata RT API events	42,000
BigQuery zero-ETL tables	10 tables
Hit email subscribers	900,000
Triple M email subscribers	650,000
Press Start email subscribers	180,000
B2B/Trade email subscribers	35,000
Internal/Staff email subscribers	2,700

2. Credit Calculation

Formulas (from SP Calculator)

Web + Mobile Credits = MUVs × 8 decisions/MUV × 12 months × contract years

Email Credits = monthly emails × % with recommendations × 1.25 batch multiplier × 12 months × contract years

Web + Mobile Personalisation Credits

$1,088,000 \times 8 \times 12 \times 1 = 104,448,000$

Email Personalisation Credits (33% recommendation rate)

$2,091,000 \times 0.33 \times 1.25 \times 12 \times 1 = 10,350,450$

Total Annual Credits

Component	Annual Credits
Web + Mobile	104,448,000
Email (33% recs)	10,350,450
Total	114,798,450

3. SKU Breakdown

SKU	Qty	Notes
Salesforce Personalization (base)	1	Includes 50M credits/year
Personalization Card (1M credits)	65	115M total – 50M included = 65M additional
RT Profiles (10K units)	109 min 1,000	1,088,000 MUVs ÷ 10,000
DC Data Services Card (100K credits)	Scope via BVD	90M RT events/month + 42K API events drive this

4. Items Not Captured in SP Credits

- **90M monthly real-time ingest events** (LiSTNR mobile) — biggest DC Data Services driver, scoped separately via BVD
- **425K monthly push sends + 200K in-app sends** — not in SP credit formula
- **10 BigQuery zero-ETL tables** — DC ingestion/storage, scoped in BVD
- **B2B/Trade** (35K subscribers) and **Internal/Staff** (2,700 subscribers) — no send volumes provided, minimal impact

5. Sensitivity Analysis

Scenario	Annual Credits	Cards Needed
33% email recs (default)	114,798,450	65
50% email recs	120,594,000	71
100% email recs	130,536,000	81
2-year contract (33% recs)	229,596,900	180

The 8 decisions/MUV multiplier is the dominant variable (5 page views × 1.5 personalisations per page). 738K web MUVs is relatively modest, but the 350K mobile MAUs add meaningfully. If SCA ramps personalisation across more pages, the 8x could go higher.
